

5th Wheel DLA / Dust Suppression Trailer

Dust suppression on back roads is a big job. North America has 1.7 Million miles (2.8 million km) of unpaved roads.

The 5th Wheel DLA / Dust Suppression Trailer is engineered to tackle these big jobs with ease.

In the summer, the trailer can stay on the road longer during dust suppression runs. It can also be used for dust suppression on large constructions sites, or as a tanker for water-on-demand.

In the winter, the spray bar can apply brine to the road surface when temperatures are below freezing.

Designed with simple systems, and reliable components, this attachment does more work, simply by being bigger.

Standard Features

1. Two heavy duty 3250 US gallon liquid tanks capable of carrying 6500 US gallons total.
2. Galvanized high strength steel trailer frame and stainless steel components resist corrosion.
3. Poly fenders on trailer.
4. Stainless steel / aluminum rear enclosure keeps pump and valves protected from the elements.
5. Galvanized steel catwalk platform and fold-down ladder between tanks, with tank ball valve manifold located underneath with remote handles for easy access.
6. Stainless steel hydraulic lines for liquid pump pressure and return functions.
7. Height-adjustable spray bar assembly with rubber flaps fore and aft.
8. Power unload to quickly empty tanks.

Options

- Spray bar side extensions to increase spread width up to 12', or 3-lane spray bars.
- Rear cabinet mounted minibars or rear sign board.

Cabinet Mounted Minibar lights, with 12' boom extension spray bar.

Easily accessible tank manifold shut-off valves.
